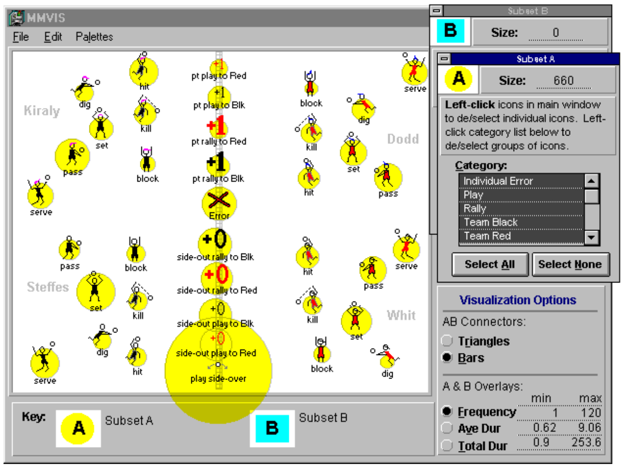
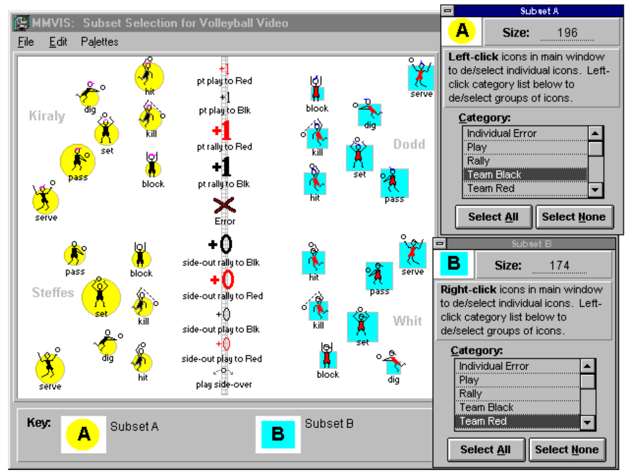
Comparing MMVIS to a Timeline for Temporal Trend Analysis of Video Data
Stacie Hibino and Elke A. Rundensteiner, pp. 195-204 [AVI'98 Conference Proceedings]

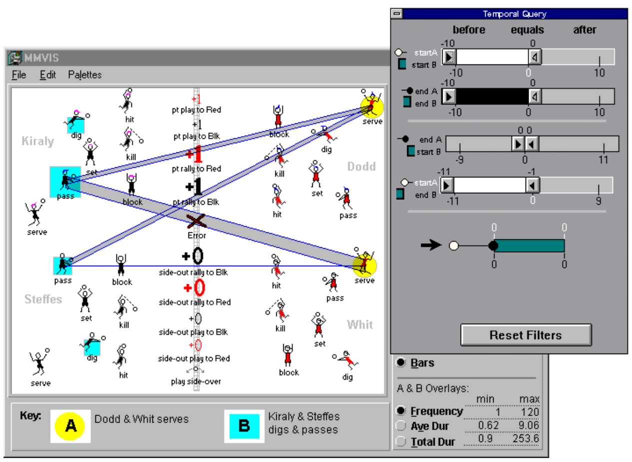
(Note: Color plates are numbered to correspond to gray-scale figures.)



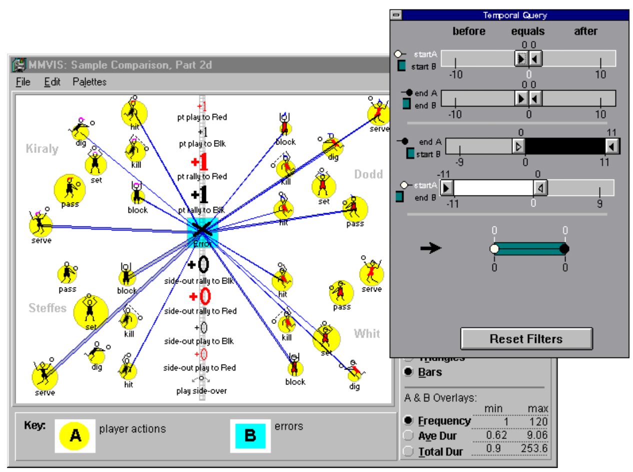
Color Plate 3. Comparing temporal frequency of events.



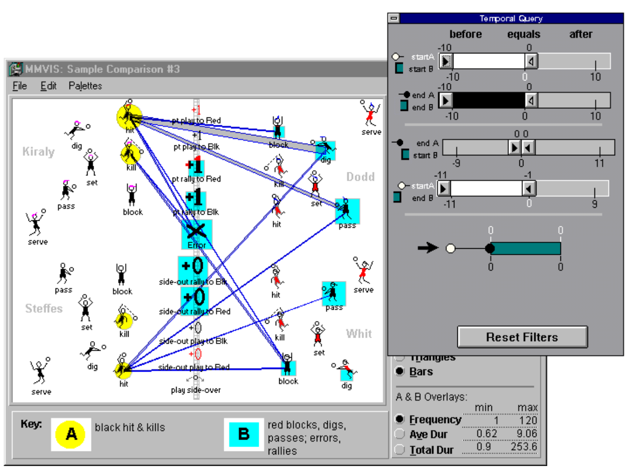
Color Plate 7. Sample interesting use of subset selection to compare frequency sums of groups of events.



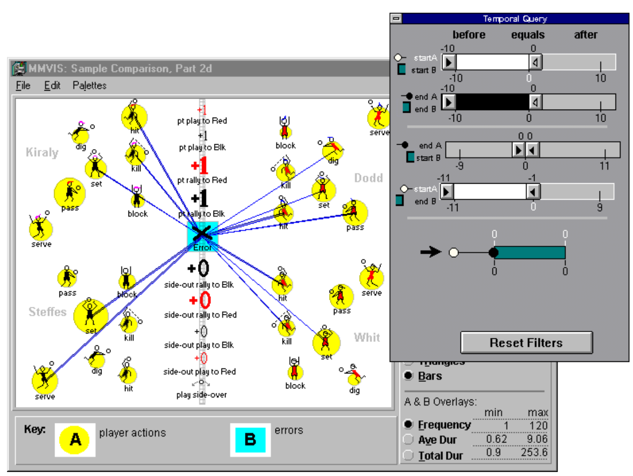
Color Plate 4. Using MMVIS to compare serve reception by specifying the AB sequence relationship ( ) in TVQL and reviewing the results in TViz.



Color Plate 8. Using MMVIS to identify types and relative frequency of errors that occurred during the game.



Color Plate 6. Sample screen shot of the third MMVIS scenario used during testing.



Color Plate 9. Updating the query in Figure 8 to examine what types of events occurred before errors.
